System Requirements For CamOnWeb:

Storage and Recycling As an advancement in the area of technology, waste management and green living, new technologies in the recycling field such as thermochemical conversion have been gaining popularity in recent years. Recycling waste in an economical and environmentally friendly manner is essential to the management of waste. Currently, waste is processed and treated mainly through physical, mechanical and biological processes. In the first and second generation mechanical treatment processes, people manually dig the waste for sorting to remove unwanted materials. The third generation mechanical treatment process operates on the basis of sorting by composition
