AutoCAD Activation Code was originally released in the early 1980s for the Apple II and IBM PC platforms. Support for other platforms was added in later years. Since the beginning of its development in 1982, AutoCAD has been a popular CAD application for drafting and computer-aided design. Today, it remains the dominant desktop CAD application in use. According to recent statistics from the Architectural Resources Group (ARG), CAD software usage in the United States decreased by 5% from 2011 to 2012, dropping from 8.9 million to 8.4 million users. AutoCAD history AutoCAD is a general-purpose commercial CAD application that focuses on three areas: drafting, design, and documentation. As a desktop application, AutoCAD typically runs on personal computers. Though the original release date of AutoCAD was 1983, the first registered and actual sale of AutoCAD 1 was in June 1984 at the American International Toy Fair. AutoCAD 1 featured an implementation of a fixed desk version of the user interface. During 1984, the first beta versions of AutoCAD 1 were available to the public. AutoCAD 1.0 featured a desktop-based user interface that featured an icon-based menu bar, where icons were replaced with pull-down menus that were accessed by the "right click" method. When the pull-down menu was clicked on, a list of items appeared. Users could click on one of the items on the menu to launch the desired task. With the introduction of the first beta version, the number of internal commands included in AutoCAD was reduced from 100 to 40. The end-user was able to easily switch between drawing and documentation modes. The first release included drafting tools, dimensioning tools, block drawing, text, and importing and exporting capabilities. AutoCAD 1.0 was released in September 1984, and the software was distributed via floppy disks for US\$1,299. The number of internal commands was increased to 50, and the first batch of 64-bit ports was shipped. AutoCAD 1.1 was released on April 5, 1985, adding additional graphic commands, as well as new features. The cost of AutoCAD 1.1 was US\$2,299. By the end of 1985, with the release of AutoCAD 1.2, a full 64-bit platform was introduced, which meant that the software was platform independent. The company also developed a Windows

Dow hits a record high after S&P 500 soars 11% on strong data Tribune News Service Published: Tuesday, February 19, 2014, 18:13 [IST] NEW YORK (Reuters) - U.S. stocks climbed to a record high on Monday on more data showing the economy growing at a faster pace, while the dollar slipped after a strong jobs report offset worries about a taper. The Dow Jones industrial average posted its first monthly gain in four months and the S&P 500 was on course for its best February since 1999. The Standard & Poor's 500 Index was up 11.8 percent in February and the Dow was up 9.9 percent for the month, the most since June 2012. "The fact that this is the first time that we've been positive for February, if you go back to some of the older data, that's not true. So there's a lot of positives to point to," said Terry Sandven, chief equity strategist at U.S. Bank Wealth Management in Minneapolis. "You've had the last week of data that we've seen post the initial earnings releases. You've got the first earnings in the sector, and then you have the economic data." The Dow and S&P 500 were also boosted by strong data on industrial production and the number of Americans filing for unemployment benefits, which both showed continued solid economic growth. The Dow Jones Transportation Average soared 4.3 percent, the highest since July 2014, the day after the Federal Reserve's policy statement. Traders said data showing the strongest reading in initial jobless claims in six years helped support the Dow industrials. Investors welcomed the news because the claims figures are usually volatile, and last week's disappointing claims number gave some support to the case for a taper. The Dow was up 673.73 points, or 2.95 percent, at 13,032.24.
