Click to expand... Vulkan,

OpenGL and Metal are all different, completely different ways of accelerating the graphics. Your engine may be able to utilize all of them, but I don't know that a plugin for any of them has been made. If you have the resources to create your own plugin you can create a mod for any of the 3, you won't have to make your own plugin. I have to

say, the hybrid PhysX mod works fine (at least in my game) for my 1070. I have voodoo disabled in the bios. The only reason I'm trying to use hybrid PhysX instead of voodoo is because my 1070 is not compatible with voodoo and I don't like using voodoo on my msi rtx 1070. I see, but adding all those extra files could bog down a lot of computers. Some computers are infested

with malware too that can make your game run slower so if you have the resources and time to make a plugin from scratch I would strongly suggest it. Again, it's probably not something that many people will have the time or desire to do, so you may just have to wait for a plugin to be created. I have to say, the hybrid PhysX mod works
