Q: Matlab, accesibilidad Estoy realizando un programa para un proyecto de grado. Necesito entender como se realiza la gráfica en Matlab y lo pruebo en el paquete gallery. La gráfica que tengo no es parecida a la que trae el paquete gallery. No sé en que lección de la vida va a aprender, pero voy a aprender muy bien y me fascina... A: Si tu programa es mas o menos pequeño, quizás trasbarte un ejemplo que haya una relación aproximada entre el código que tengas y la nueva gráfica. Sería una de las mejores maneras para tratar la aplicación. En tal caso cuenta con la posibilidad de hacer copias del código que tienes y ver cómo queda. Cuando ejecutas el siguiente código es lo que se ve: `load usrabbi.mat figure(1) plot(1:100,'r') title('Nueva gráfica de matlab') print -depsc'mesh', 7,7,'-colors', 'k'; %mesh es el nombre de la variable que guarda el grosor de las plantillas print -depsc'mesh', 7,7,'-colors', 'k'; %crea una nueva mesa y para colores` Q: How to make a list of students in Django? I'm starting to work with Django and have a question about how to do a list of students. I have a model Student, with email, first name, last name and a list of groups, and I also have the model Group, with an email, name and list of students (I didn't add a profesor to the list of students, nor did I add a student to a group, all group users are automatically added to the group). I'd like to make a list of all groups of students, to group and order them by

We report a discovery of a dramatic modification of the quasiparticle (QP) weight Z on introduction of a defect. A detailed study of the cuprate model systems reveals an intriguing experimental correlation between the relative amplitude of the Z-anomaly and the doping level in doped cuprates, a feature not observed in earlier studies. Our model system of graphene with a potential well in a randomly doped B sublattice (the relevant doping level being controlled by the electron density) reveals a corresponding correlation. We argue that the presence of a random potential in the Dirac model allows for a competition between localized and extended states, leading to a unique pseudogap-type energy scale. Furthermore, we suggest that the Z-anomaly should be expected at the optimal doping level.Q: Pointer to forward declared class class A {}; class B; class C { B* b; // compile error: B is forward declared 6d1f23a050
